

## Electric Boom Lift Attachment

Electric Boom Lift Attachments - The most common description utilized for electric lift trucks are the type "E" meaning the trucks meets the lowest requirements for electrical hazards and fire. The forklifts which are described as type E are not suitable for use in dangerous places. Type "ES" lift trucks meet all the standards of Type "E" trucks and have additional equipment in order to prevent the emission of sparks and limit the surface temperature of lift truck components.

The more specialized trucks are the type "ES" electric vehicle and these are not typically obtainable. Type "EE" trucks meet all the standards of the ES and E model and have all electric motor and spark generating parts totally enclosed. The type "EE" model is therefore utilized where hazardous environments have been identified. Type "EX" trucks are specifically intended for use in surroundings wherever vapors or flammable fibers or dust could be present. These forklifts are made utilizing no spark generating components along with several protective measures in order to ensure optimum safety in the risky applications they can be called upon for.
